The documents of Siri Guru Granth Sahib have been created in such a way that on most commonly used computer systems correct number of pages will be displayed (1430 in all). However, on some computers depending upon the printer set-up the displayed number of pages of MS Word documents may be more than the actual. This problem can be easily fixed by reducing the left & right margins of the documents. In rare instances, it may also require a slight adjustment of paragraph indentation/margins of some headline paragraphs. Acrobat Reader files always display proper number of pages (i.e., the page numbers of Acrobat Reader files do not change with the change of printer setup).
